

# Mapping active ingredients of a parent-implemented intervention

Michigan State University Autism Research Lab

---

## What is it?

Parent involvement in intervention important for improving outcomes for children on the autism spectrum or with social communication delays.

This project is designed to better understand how Project ImPACT, a parent-implemented intervention program, works.

---

## What will you do?

Participants will complete a phone interview which will take about 45 minutes to 1 hour.

- The questions will focus on **your experience** of Project ImPACT and how it works.
  - It will include questions about your experiences with your Project ImPACT coach, how your child responded to Project ImPACT strategies, and how it into your family's life.
- 

This research is being conducted by a graduate student researcher, Kyle Frost, M.A., and her advisor, Dr. Brooke Ingersoll, Ph.D., BCBA-D. They are based in the MSU Autism Lab in the Department of Psychology at Michigan State University.

## To participate, you must:

- Be at least 18 years old
- Have participated in parent training using the Project ImPACT curriculum for young children with social communication delays

## You will:

- Receive a \$30 gift card for completing the study interview
